# Uncertainty in Artificial Intelligence

Proceedings of the Thirtieth Conference (2014)

July 23-27, 2014, Quebec City, Quebec, Canada

**Edited by**

Nevin L. Zhang, The Hong Kong University of Science and  
Technology, China

Jin Tian, Iowa State University, USA

**General Chair**

Ann Nicholson, Monash University/Bayesian Intelligence,  
Australia

**Sponsored by**

Microsoft Research, Artificial Intelligence Journal, Facebook Inc.,  
Google Inc., Charles River Analytics, IBM Research

**AUAI Press Corvallis, Oregon**

Cover design © Alice Zheng.

| Best Paper Awards                                                                                                                                                                           | xix      |
| <b>1 Proceedings</b>                                                                                                                                                                        | <b>1</b> |
| MEMR: A Margin Equipped Monotone Retargeting Framework for Ranking.<br><i>Sreangsu Acharyya, Joydeep Ghosh</i> . . . . .                                                                    | 1        |
| On Convergence and Optimality of Best-Response Learning with Policy Types in Multiagent Systems.<br><i>Stefano Albrecht, Subramanian Ramamoorthy</i> . . . . .                              | 12       |
| Accelerating MCMC via Parallel Predictive Prefetching.<br><i>Elaine Angelino, Eddie Kohler, Margo Seltzer, Amos Waterland, Ryan Adams</i> . . . . .                                         | 22       |
| A variational approach to stable principal component pursuit.<br><i>Aleksandr Aravkin, Stephen Becker, Volkan Cevher, Peder Olsen</i> . . . . .                                             | 32       |
| Markov Network Structure Learning via Ensemble-of-Forests Models.<br><i>Eirini Arvaniti, Manfred Claassen</i> . . . . .                                                                     | 42       |
| Can(Plan)+: Extending the Operational Semantics of the BDI architecture to deal with Uncertain Information.<br><i>Kim Bauters, Weiru Liu, Jun Hong, Carles Sierra, Lluís Godó</i> . . . . . | 52       |
| Message Passing for Soft Constraint Dual Decomposition.<br><i>David Belanger, Alexandre Passos, Sebastian Riedel, Andrew McCallum</i> . . . . .                                             | 62       |
| Bayesian Interactive Decision Support for Multi-Attribute Problems with Even Swaps.<br><i>Debarun Bhattacharjya, Jeffrey Kephart</i> . . . . .                                              | 72       |
| Learning to Predict from Crowdsourced Data.<br><i>Wei Bi, Liwei Wang, James Kwok, Zhuowen Tu</i> . . . . .                                                                                  | 82       |
| Lifted Tree-Reweighted Variational Inference.<br><i>Hung Bui, Tuyen Huynh, David Sontag</i> . . . . .                                                                                       | 92       |
| Approximate Decentralized Bayesian Inference.<br><i>Trevor Campbell, Jonathan How</i> . . . . .                                                                                             | 102      |
| Inferring latent structures via information inequalities.<br><i>Rafael Chaves, Lukas Luft, Thiago Maciel, David Gross, Dominik Janzing, Bernhard Schölkopf</i> . . . . .                    | 112      |
| Near-optimal Adaptive Pool-based Active Learning with General Loss.<br><i>Nguyen Viet Cuong, Wee Sun Lee, Nan Ye</i> . . . . .                                                              | 122      |
| A Permutation-Based Kernel Conditional Independence Test.<br><i>Gary Doran, Krikamol Muandet, Kun Zhang, Bernhard Schölkopf</i> . . . . .                                                   | 132      |
| Parallel Markov Chain Monte Carlo for Pitman-Yor Mixture Models.<br><i>Kumar Dubey, Sinead Williamson, Eric Xing</i> . . . . .                                                              | 142      |

|                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------|-----|
| Market Making with Decreasing Utility for Information.                                                                 |     |
| <i>Miroslav Dudík, Rafael Frongillo, Jennifer Wortman Vaughan</i>                                                      | 152 |
| Universal Convexification via Risk-Aversion.                                                                           |     |
| <i>Krishnamurthy Dvijotham, Maryam Fazel, Emanuel Todorov</i>                                                          | 162 |
| Structured Proportional Jump Processes.                                                                                |     |
| <i>Tal El-Hay, Omer Weissbrod, Elad Eban, Maurizio Zazzi, Francesca Incardona</i>                                      | 172 |
| Electing the Most Probable Without Eliminating the Irrational: Voting Over Intransitive Domains.                       |     |
| <i>Edith Elkind, Nisarg Shah</i>                                                                                       | 182 |
| Iterative Splits of Quadratic Bounds for Scalable Binary Tensor Factorization.                                         |     |
| <i>Beyza Ermis, Guillaume Bouchard</i>                                                                                 | 192 |
| Finding Optimal Bayesian Network Structures with Constraints Learned from Data.                                        |     |
| <i>Xiannian Fan, Brandon Malone, Changhe Yuan</i>                                                                      | 200 |
| Bisimulation Metrics are Optimal Value Functions.                                                                      |     |
| <i>Norm Ferns, Doina Precup</i>                                                                                        | 210 |
| Annealing Paths for the Evaluation of Topic Models.                                                                    |     |
| <i>James Foulds, Padhraic Smyth</i>                                                                                    | 220 |
| Active Learning of Linear Embeddings for Gaussian Processes.                                                           |     |
| <i>Roman Garnett, Michael Osborne, Philipp Hennig</i>                                                                  | 230 |
| Estimating Causal Effects by Bounding Confounding.                                                                     |     |
| <i>Philipp Geiger, Dominik Janzing, Bernhard Schölkopf</i>                                                             | 240 |
| Bayesian Optimization with Unknown Constraints.                                                                        |     |
| <i>Michael Gelbart, Jasper Snoek, Ryan Adams</i>                                                                       | 250 |
| Nonparametric Clustering with Distance Dependent Hierarchies.                                                          |     |
| <i>Soumya Ghosh, Michalis Raptis, Leonid Sigal, Erik Sudderth</i>                                                      | 260 |
| Transformation-based Probabilistic Clustering with Supervision.                                                        |     |
| <i>Siddharth Gopal, Yiming Yang</i>                                                                                    | 270 |
| Understanding the Complexity of Lifted Inference and Asymmetric Weighted Model Counting.                               |     |
| <i>Eric Gribkoff, Guy Van Den Broeck, Dan Suciu</i>                                                                    | 280 |
| Interactive Learning from Unlabeled Instructions.                                                                      |     |
| <i>Jonathan Grizou, Iñaki Iturrate, Luis Montesano, Pierre-Yves Oudeyer, Manuel Lopes</i>                              | 290 |
| Batch-Mode Active Learning via Error Bound Minimization.                                                               |     |
| <i>Quanquan Gu, Tong Zhang, Jiawei Han</i>                                                                             | 300 |
| Efficient Bayesian Nonparametric Modelling of Structured Point Processes.                                              |     |
| <i>Tom Gunter, Chris Lloyd, Michael Osborne, Stephen Roberts</i>                                                       | 310 |
| Learning Peptide-Spectrum Alignment Models for Tandem Mass Spectrometry.                                               |     |
| <i>John Halloran, Jeffrey Bilmes, William Noble</i>                                                                    | 320 |
| Off-policy TD( $\lambda$ ) with a true online equivalence.                                                             |     |
| <i>Hado Van Hasselt, Rupam Mahmood, Rich Sutton</i>                                                                    | 330 |
| Constraint-based Causal Discovery: Conflict Resolution with Answer Set Programming.                                    |     |
| <i>Antti Hyttinen, Frederick Eberhardt, Matti Järvisalo</i>                                                            | 340 |
| Generating structure of latent variable models for nested data.                                                        |     |
| <i>Masakazu Ishihata, Tomoharu Iwata</i>                                                                               | 350 |
| Monotone Closure of Relaxed Constraints in Submodular Optimization: Connections Between Minimization and Maximization. |     |
| <i>Rishabh Iyer, Stefanie Jegelka, Jeffrey Bilmes</i>                                                                  | 360 |
| Min- $d$ -Occur: Ensuring Future Occurrences in Streaming Sets.                                                        |     |
| <i>Vidit Jain, Sainyam Galhotra</i>                                                                                    | 370 |
| Instance Label Prediction by Dirichlet Process Multiple Instance Learning.                                             |     |
| <i>Melih Kandemir, Fred Hamprecht</i>                                                                                  | 380 |
| Closed-form Solutions to a Subclass of Continuous Stochastic Games via Symbolic Dynamic Programming.                   |     |
| <i>Shamin Kinathil, Scott Sanner, Nicolás Della Penna</i>                                                              | 390 |
| Recursive Best-First AND/OR Search for Optimization in Graphical Models.                                               |     |
| <i>Akihiro Kishimoto, Radu Marinescu</i>                                                                               | 400 |
